# Reality Theme Installation Instructions

## Install Wordpress

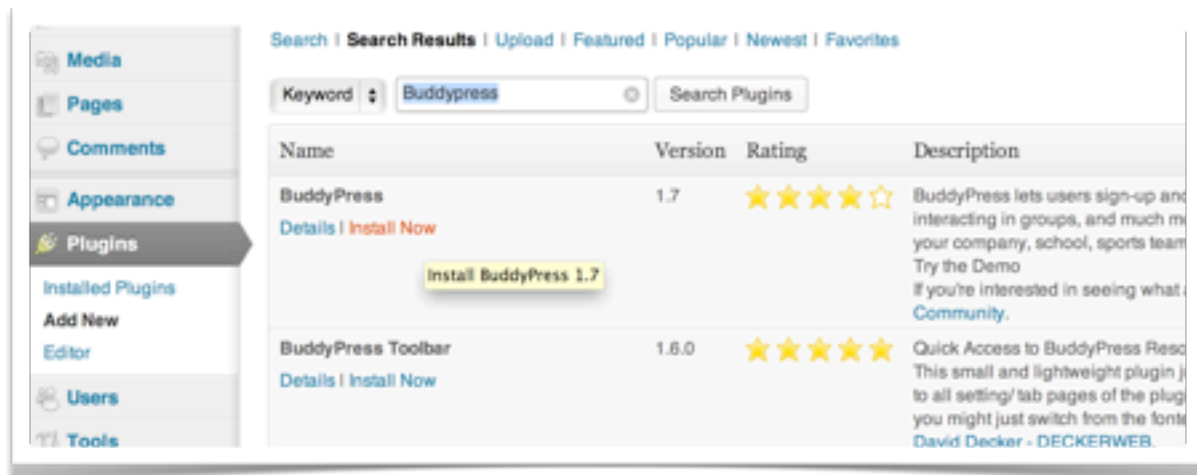

Go through the [Wordpress 5-Minute Install Instructions](#) to setup your Wordpress install.

## Install Buddypress Plugin

1. In your fresh Wordpress install, go to the “Plugins” menu on the left and search “BuddyPress”

2. Find the “BuddyPress” plugin and hit “Install”

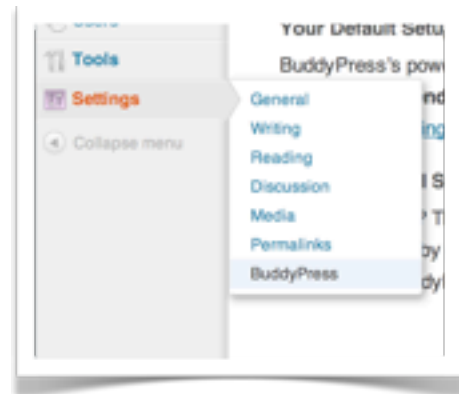

### 3. Activate the BuddyPress Plugin

## Set Buddypress Options

### Activate Buddypress Components

1. Go to the “Settings” menu on the left and click on “BuddyPress” to access the BuddyPress Options.

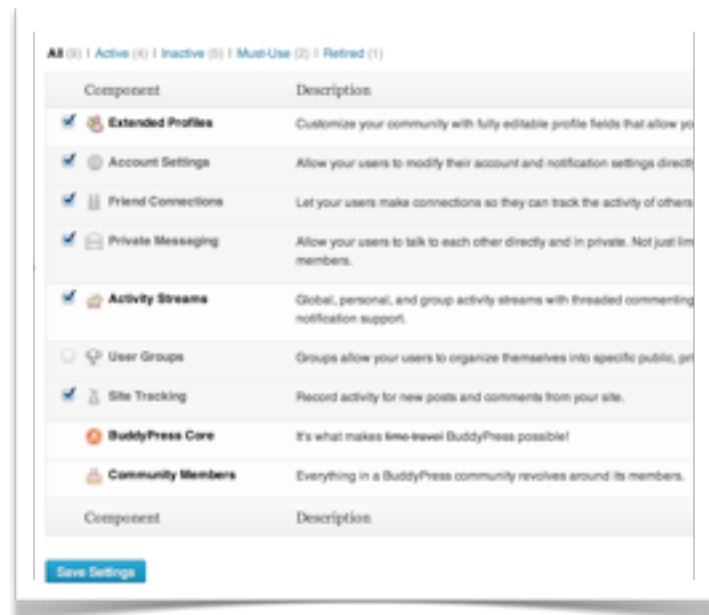

2. Make sure the following Components are checked and activated:

- Extended Profiles
- Account Settings
- Friend Connections
- Private Messaging
- Activity Streams
- Site Tracking

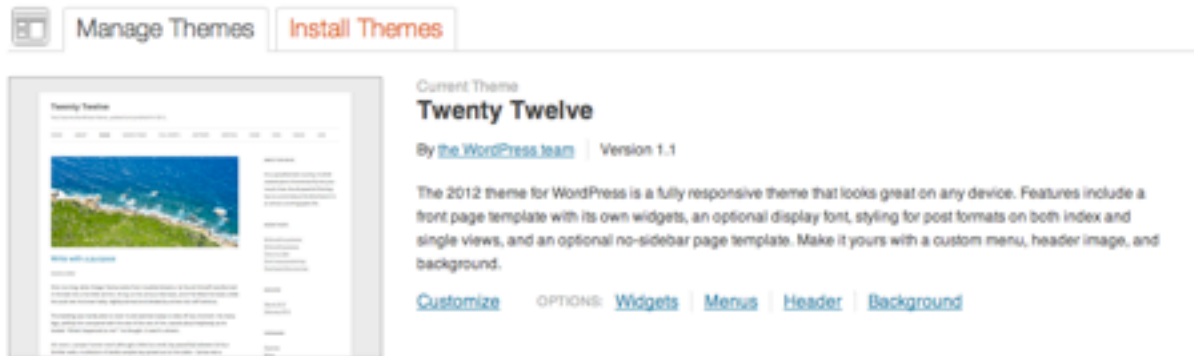

*Reality currently does not support User Groups.*

Click “Save Settings”

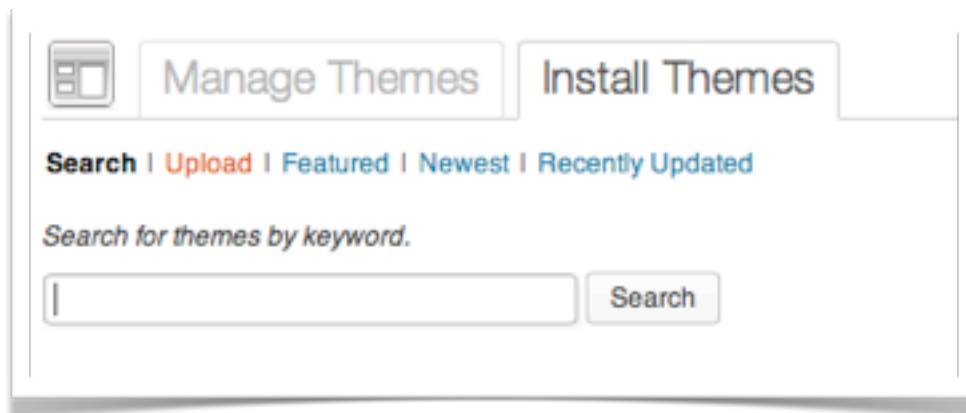

# Activate Reality Theme

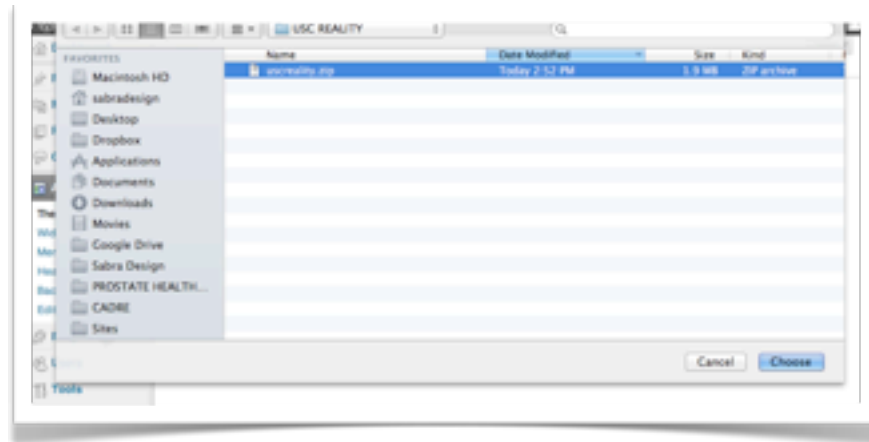

1. Go to the “Appearance” menu on the left.
2. Click on the “Install Theme Tab”

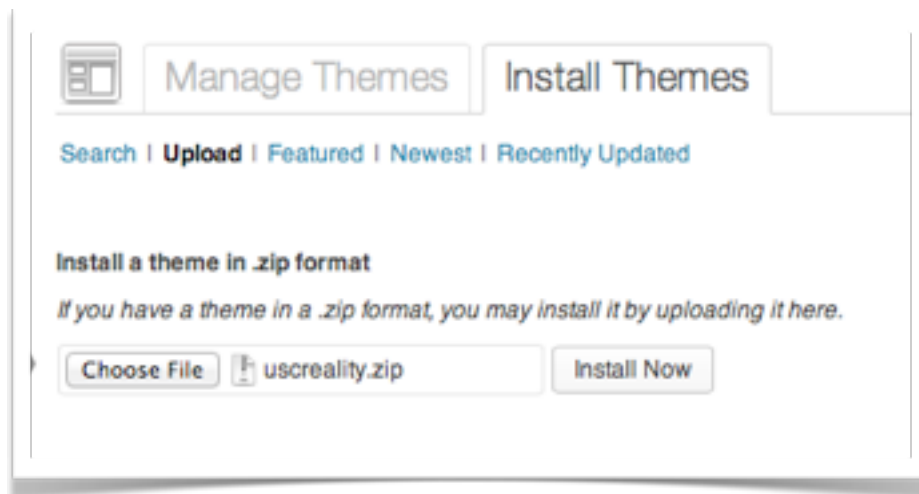

3. Click on the “Upload” Link

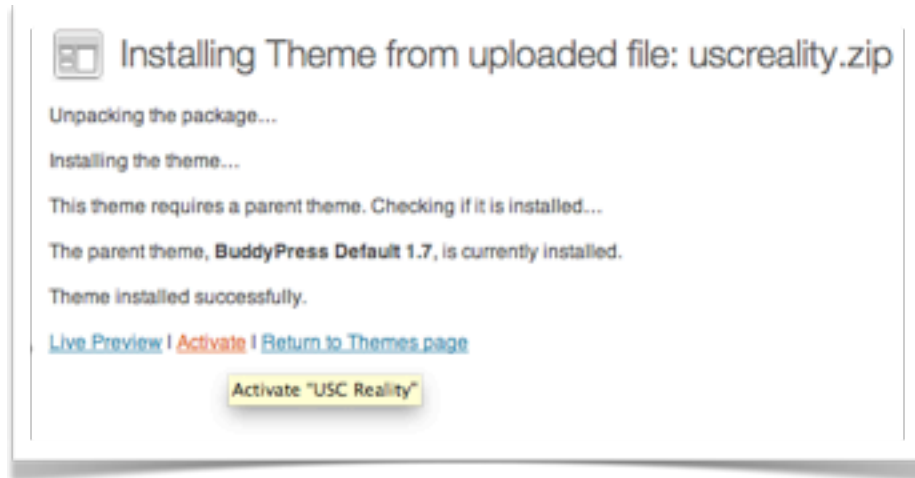

4. Click “Select File”, navigate to the “uscreality.zip” theme file and click choose.

5. Now hit “Install Now” to upload the theme to your Wordpress Install

6. Once the theme has successfully uploaded, activate it by clicking the “Activate” link.

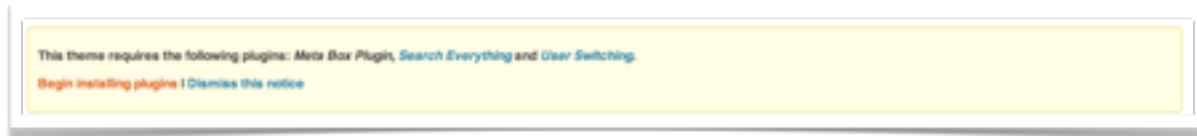

7. The Reality theme is now the active theme!

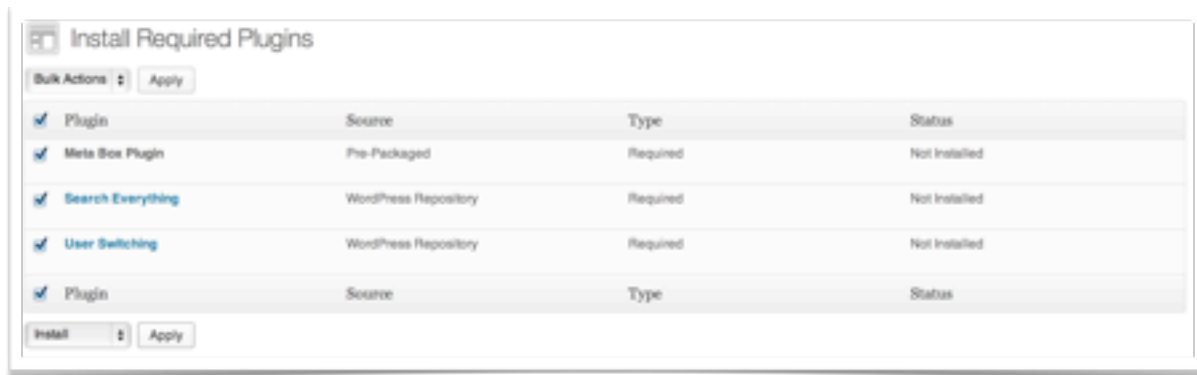

## Install Required Plugins

You will be prompted to install additional plugins at the top of the screen.

1. Click “Begin installing plugins.”

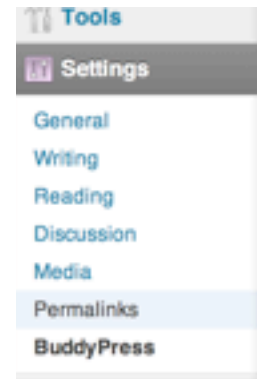

2. Click the top or bottom checkbox to select all plugins, select “Install” from the “Bulk Actions” drop-down and click “Apply.”

## Setup Permalinks

1. Go to the “Settings” menu on the left and click on “Permalinks”

2. Choose the “Post name” option and click “Save Changes”

A screenshot of the WordPress Permalinks settings page. The 'Common Settings' section shows six radio button options: Default, Day and name, Month and name, Numeric, Post name (which is selected with a blue dot), and Custom Structure. To the right of each option is a preview of the resulting URL. For 'Post name', the preview is 'http://reality-install-test/sample-post/'. Below the 'Common Settings' section is an 'Optional' section with a paragraph of text explaining that users can enter custom structures for category and tag URLs. There are two input fields: 'Category base' and 'Tag base'. At the bottom left of the form is a blue 'Save Changes' button.

Pat yourself on the back because your Reality Theme is now installed!!!!

## Reality Game Setup

### Import Cards

The easiest way to import cards into the Reality Theme is by using a .CSV template file. Your .CSV file must have the following header structure. You may copy and paste it into a blank spreadsheet to start using it.

ID	Set member #	Set Size	Collectible	Description	Image filename	Gerund/Prefix	Face ("playable side")	Card Type	Face Category	Outs	R, L or S template	Special Out	Pts AAA	Pts AA	Pts A	Face Description (optional except for Maker cards)	Powerup (optional)
----	--------------	----------	-------------	-------------	----------------	---------------	------------------------	-----------	---------------	------	--------------------	-------------	---------	--------	-------	--	--------------------

## Limitations

- Image filenames may not have any spaces in them, only characters and underscores
- Special characters like “é” may not render properly when imported

# Reality Theme Features

The Reality theme comes with a slew of features.

## Shortcodes

Reality shortcodes are used to generate pieces of content to be displayed in pages, posts, and widgets.

### Reality Card - [reality\_card]

This shortcode displays a card with a given number. If no number is specified, a graphic with the text “No Card Found” will be displayed.

### Syntax

[reality\_card number=”11006” side=”front” size=”large”]

### Variables

- “number”: The card number ( or slug )
- “side”: Which side of the card to display
  - Options
    - “front”
    - “back”
- “size”: What size to show
  - Options
    - “large”
    - “medium”
    - “small”

### Reality Leader Boards - [reality\_leaderboard]

This shortcode generates Reality leader boards.

### Syntax

[reality\_leaderboard type=”total\_points” size=”10” award=”funniest” title=””]

## Variables

- “type”: the type of leader board you wish to display
  - Options
    - “total\_points” - The total point leaders
    - “biggest\_deals” - The deals with the most points
    - “most\_deals” - The users with the most deals
    - “audience” - Audience awards
- “size”: The number of seeds to display
- “award”: If the “type” is “audience”, this variable determines which audience awards to show
  - Options
    - Options are dynamically determined based on the settings input in the “Deal Settings” tab of the “Reality Settings” admin page. This setting must be set to the value in the “Award Slug” column

## Past Season Scores - [reality\_past\_scores]

This shortcode looks up to see if the specified user has scores from past seasons of Reality. If any of those scores are non-zero, it will display them in a table.

## Syntax

[reality\_past\_scores user\_id="1" title=""]

## Variables

- “user\_id” : The id of the user you are displaying the scores of
  - Options
    - Options are determined based on a user’s user ID in the Wordpress backend
- “title” : If this variable is set, it will override the default title of “Past Seasons”
